PROFESSIONAL SUMMARY

Results-driven DevOps & Cloud Engineer with 4years of hands-on experience designing, automating, and managing cloud-native infrastructure on AWS. Proven expertise in CI/CD pipeline development, Kubernetes container orchestration, Infrastructure as Code (Terraform/Ansible), and end-to-end observability. Experienced in deploying high-availability, fault-tolerant systems for real-time messaging (WebRTC) and OTT streaming platforms supporting 1M+ concurrent users. Adept at multi-account AWS architecture, GitOps workflows, and cross-functional DevSecOps practices.

TECHNICAL SKILLS

- **Cloud (AWS):** EC2, S3, VPC, ECR, RDS, SES, CloudFront (CDN), IVS, Secrets Manager, EKS, Certificate Manager, Load Balancer
- **IAC & Config Management :** Terraform, Ansible
- **Containers & Orchestration:** Docker, Docker Compose, Kubernetes (EKS)
- **CI/CD & GitOps:** Jenkins (scripted), GitLab CI, GitHub, ArgoCD
- **Monitoring & Logging:** Prometheus, Grafana, Uptime Kuma, Loki, mimir
- **Web Servers & SSL:** Apache, Nginx, Caddy, Certbot, Let's Encrypt
- **OS:** Linux (Ubuntu)
- **Scripting:** Bash scripting
- **Realtime & Signaling:** Janus WebRTC, STUN/TURN
- **Messaging & Streaming:** RabbitMQ, Kafka, Redis
- **Databases & Storage:** MySQL, MongoDB, Cassandra, Elasticsearch

PROFESSIONAL EXPERIENCE

Cloud Administrator I , CONTUS Tech

Dec 2024 - Present

- Built and managed CI/CD pipelines using Git, GitHub, GitLab, and Jenkins (scripted pipelines) to streamline deployments across real-time messaging and OTT streaming platforms, reducing release cycle time, cutting deployment overhead by 90%
- Automated infrastructure provisioning and configuration using Terraform and Ansible in hybrid and cloud-native environments, ensuring consistent, version-controlled resource management.
- Deployed and managed 20+ containerized microservices using Docker, Docker Compose, and Kubernetes (EKS), improving deployment reliability and environment parity across Dev, Staging, and Production.
- Implemented full-stack observability using Prometheus, Grafana, Loki, Mimir, and Uptime Kuma for proactive monitoring, alerting, and log aggregation for 99.9% uptime.
- Configured and managed Nginx, Apache, and Caddy reverse proxies with automated SSL certificate management via Let's Encrypt and Certbot.
- Managed distributed systems including Kafka, RabbitMQ, Redis, MongoDB, Cassandra, and Elasticsearch for high-throughput, low-latency workloads.
- Managed extensive AWS cloud services: EC2, S3, VPC, Route 53, CloudFront CDN, SES, WAF, Certificate Manager, ALB, MediaConvert, and IVS.
- Implemented WAF rules to protect against OWASP threats to ensure the security of the application

- Integrated SonarQube for static code analysis and managed build artifact lifecycle using Nexus Repository Manager.

DevOps Engineer, KADIT INNOVATIONS

Aug 2022 - Dec 2024

- Designed and implemented AWS multi-account architecture using AWS Landing Zone, creating isolated Dev, Staging, and Production environments to enhance security and governance.
- Configured VPC Peering across AWS accounts to enable secure, low-latency communication between environments.
- Built and maintained Azure DevOps pipelines to automate build and artifact creation, with generated artifacts stored in AWS S3 for centralized management.
- Implemented AWS CodePipeline for continuous delivery, automating multi-environment deployments and reducing manual deployment overhead by 70%.
- Developed Infrastructure as Code (IaC) using Terraform for consistent, repeatable, and auditable provisioning of all AWS resources.
- Containerized applications using Docker, achieving full environment consistency across Dev, Staging, and Production — eliminating 'works on my machine' issues.
- Managed and maintained Kubernetes clusters hosting production web applications with high scalability, resilience, and zero-downtime deployments.

PRODUCTS HIGHLIGHTS

MirrorFly -Realtime Messaging Platform

Platform implemented for clients **Masdr, Tirasoft, Daz, etc.**

- MirrorFly is a self-hosted, white-label messaging solution supporting 1M+ concurrent users with real-time chat, voice, and video communication features.
- Built using microservices architecture, with backend components deployed via Docker, Kubernetes, and AWS EKS for high availability and fault tolerance.
- Integrated WebRTC with Janus servers, STUN/TURN configuration, and secure signaling mechanisms to enable low-latency global video/audio communication.

VPlayed - OTT Streaming Platform

Trusted by enterprise clients **Blacksheep, PeriyarVision, Reelies, etc.**

- VPlayed is a customizable OTT platform offering VOD and live streaming features with adaptive bitrate streaming and DRM integration.
- Delivered using containerized services orchestrated via Kubernetes, with video processing handled via AWS MediaConvert for scalable transcoding.
- Implemented global content delivery using CloudFront CDN, S3, and Route 53, with regional failover and cache invalidation strategies.

CERTIFICATIONS

- AWS Certified solution Architect - Pursuing

EDUCATION

2019-2022 B.Sc, CS
Sri Paramakalyani college, Alwarkurichi

2017 SSLC | 2019 HSC A.V.Rm.V,
matriculation school, Ambasamudram
